San José State University
College of Science/Physics and Astronomy
Astro 101, Descriptive Astronomy, Section 3, Fall, 2018

Course and Contact Information

Instructor: Dr. Olenka Hubickyj
Office Location: SCI 310
Telephone: (408) 924 – 5256
Email: olenka.hubickyj@sjsu.edu
Office Hours: M, T, W, Th 11:00 – 12:00 or by appt.
Class Days/Time: M W F 9:00 – 9:50 am
Classroom: SCI 258
Prerequisites: None

GE/SJSU Studies Category: R

Faculty Web Page and MYSJSU Messaging
Copies of the course materials such as the syllabus, lecture power points, and major assignment handouts, etc. will be found in our course link in Canvas. You are responsible for regularly checking with the messaging system in Canvas to learn of any updates. Grades will not be posted in Canvas; please contact me for information about your grades.

Course Description
This course is a general introduction to our present understanding of origin and evolution of stars, galaxies and the cosmos. We will spend some time discussing how science is carried out and we will focus on how the scientific method has been used to form our present understanding. We will also review the physical laws that are at work throughout the Universe. Although many facts will be presented, the course objectives will be to understand concepts rather than to memorize facts. We will focus on these topics:

1) Brief historical background, the scientific method, and basic physical laws.
2) Techniques used in modern astronomy, including the use of spectroscopy, telescopes, CCDs, & computers
3) The formation of stars, the formation of the Sun and the Solar System.
4) A brief description of the planets in our solar system and planetary systems around other stars
5) The evolution of the stars.
6) The structure of galaxies and galaxy clusters
7) The formation of the Universe: The Big Bang Theory and describe what observational evidence exists to support the theory
8) Current events in astronomy will be included when the topics are discussed, including details of my own research in planetary science. The news is full of the latest astronomical results, and we will discuss new discoveries as they arise. I encourage you to read the news (the newspaper or online), and bring articles you find interesting!
Course Learning Outcomes (CLO)

During this course:
- Students will learn to *distinguish science from pseudo-science*:
  1. criticizing a pseudo-scientific proposal and identifying the classes of errors involved;
  2. appraising the claims of causal relationships between sunspot activity and human behavior;
  3. comparing scientific vs. nonscientific arguments, i.e. Big Bang and “Young Earth” Creation.
- Students will demonstrate an *understanding of the methods of science*:
  1. predicting the properties of stars in various evolutionary stages and then testing those predictions against observations;
  2. making a statistical sampling of stars in the night sky and generalizing those results to estimate the number of stars visible in the whole sky;
  3. discussing the observation and classification of various astronomical objects, e.g., stellar spectra, galaxy morphology, etc.
  4. examining the experimental basis for radiation laws and atomic spectra.
- Students will demonstrate an *understanding of the limits of scientific investigation*:
  1. discussing the inability to accurately predict solar activity and its implications for manned spaceflight missions;
  2. examining the limitations placed on predictions of advanced stellar evolutionary states by the use of idealized models;
  3. considering the merit in claims regarding the cause of the Big Bang.
- Students will *apply a scientific approach to questions* about the Universe:
  1. identifying the origins of the chemical elements and using that information to infer when the universe was “ready” for the development of life;
  2. discussing the future of the Sun and Earth in light of stellar evolutionary theory;
  3. combining various independent lines of evidence (stellar evolution models, the Hubble Law, radioactive decay of elements) to reach conclusions about the age of the universe and the beginning of Time.
- Students will *appreciate the interrelationship of science and human beings* by:
  1. examining the impact of human light pollution on observational astronomy (based on their own observational estimates of the number of stars visible from different locations);
  2. discussing how political pressures impact funding for “abstract” research proposals (e.g., the solar neutrino experiment, SETI (Search for Extraterrestrial Intelligence)).

Required Texts/Readings

Textbook

The required textbook is *Understanding Our Universe 2nd edition*, by Palen, Kay, Smith, and Blumenthal. This textbook is accompanied by an online program, *SmartWork5*, which is required. The publisher provides access to a free study help site, StudySpace, which I strongly encourage all students to use regularly. The URL is

wwnpag.es/uou2

for the 2nd edition

This text can only be purchase at the Spartan Bookstore. The text book has been around long enough that you can probably get the book on the internet for less money. In this case, you will have to purchase *SmartWork5* online from the website; it’s purchase price is about $25.00.

Course Requirements and Assignments

Students will be expected to attend the lectures regularly and participate in class discussions. Attendance per se shall not be used as a criterion for grading according to Academic Policy F-69-24, but it is strongly encouraged! Laptops are to be used for note taking, only. It is ill advised to “surf the net”, checking e-mails or instant message during class and texting. Paying attention in class will greatly increase your chances of earning a good grade.
Assignments will consist of online homework using SmartWork5, occasional worksheet/handouts, and a semester project, which will be described and assigned in class. This semester project will fulfill the SJSU Studies courses requirement of a minimum of 3000 words of writing for which you will receive prompt feedback on content and writing proficiency. The semester project will count as one exam.

The online homework is very instructive. We will go over the basics of this software in class within the first week of the semester. Please keep in mind that the homework is 15% of your final grade! The URL to login for SmartWork5 is: https://digital.wwnorton.com/8300

To enroll you will need the class enrollment code: 107714. The student enrollment code is provided to you when you purchase the software.

Classroom Protocol

Attendance

As mentioned previously, class participation and attendance is a benefit to you to be able to do a lot of learning in the moment. Using a laptop or your cell phone to connect with shopping, social activities, and any other link is distracting to other students. Keep in mind that you are paying for getting the information you need to fulfill your college degree requirement. Don’t waste your time and money. Don’t think I don’t notice.

Please arrive on time to class. If an illness or emergency causes you to miss an exam, please notify me ASAP. The class will consist of lectures and occasional in-class group discussions with worksheets. It is not possible to make-up this kind of interaction. I understand that occasionally it may be difficult to attend a class meeting, so please be sure to let me know. You are responsible for the material that was covered in class. Either get that information from a fellow classmate or check with me. The lecture PPTs and other files will be posted in the Files link in Canvas. If you find that you have a situation that causes you to miss more than one or two classes, please contact me ASAP to figure out how this may affect your success/grade in this course.

Electronic devices

Using a laptop or your cell phone to connect with shopping, social activities, and any other links during class is distracting to other students. Don’t waste your time and money by not being fully engaged. And as mentioned before, don’t think I don’t notice. If you are having any problems with the course material please see me. Most of the time I know we can clear up any misunderstanding. I am very happy to help you!!!

Office Hours

If you are having any problems with the course material please see me. Most of the time I know we can clear up any misunderstanding. I am very happy to help you!!!

The best way to get in touch with me outside of class or office hours is via email (olenka.hubickyj@sjsu.edu). Please come by during office hours or make an appointment with me if you can’t make it to my posted office hours. Please email me to let me know when you would like to meet. Make sure to have your questions ready when you come to office hours. When other students are waiting, either join into our discussion or wait your turn. Please keep in mind that whatever is shared in office hours may also be discussed with the department chair and/or other relevant university staff concerned with your education.

Dropping and Adding

Friday, August 31 is the last day to drop without penalty. Monday, September 10 is the last day to add a class. Students are responsible for understanding the policies and procedures about add/drops, academic renewal, etc. This information can be accessed at http://www.sjsu.edu/aars.
Exams and Grading Policy

Exams and Quizzes
Astro 10 covers a wide range of material and it can be divided into natural units. Therefore, there will be 3 tests during the semester rather than one midterm and a final. These exams will be multiple choice and will be given after we have completed a unit in astronomy. There will be no quizzes.

Final Examination or Evaluation

The exam will not be a cumulative one but a regular chapter-type exam as we have had all semester long. You must take the final exam during the time specified by Academic Scheduling, which is Wednesday, Dec 12, from 7:15 to 9:30 am in our usual classroom, SCI 258.

Grading Information

Determination of Grades

The final grades will be determined as follows:

Exams and semester project = 85%
Homework = 15%

A: 90 - 100%    A-: 90 – 92%    A : 93 – 96%    A+: 97-100% (note: for GPA purposes, A=A+)
B: 80 - 89%     B- : 80 – 82%    B : 83 – 86%    B+: 87-89%
C: 70 - 79%     C- : 70 – 72%    C : 73 – 76%    C+: 77-79%
D: 60 - 69%     D- : 60 – 62%    D : 63 – 66%    D+: 67-69%
F: 0 - 59%

There will be plenty of opportunities for extra credit (observational opportunities here on campus, SJSU Astronomy seminars, DeAnza Planetarium Program, Foothill College Astronomy Lecture Series, Evergreen Valley College observing nights, museum visits, etc). These will be announced in class. Attendance per se shall not be used as a criterion for grading according to Academic Policy F-69-24, but I strongly encourage it!

University Policies

Per University Policy S16-9, university-wide policy information relevant to all courses, such as academic integrity, accommodations, etc. will be available on Office of Graduate and Undergraduate Programs’ Syllabus Information web page at http://www.sjsu.edu/gup/syllabusinfo/
