Title:
Research Updates and Student Research Opportunities

By: Professors Benedikt Harrer, Christopher Smallwood, Neil Switz, and Kenneth Wharton

Abstract:
Have you ever wondered what physics professors do when they’re not in the classroom? Would you like to get involved with research? Then come to the next department seminar! Drs. Harrer (physics education), Wharton (quantum foundations), Switz (biomedical optics), Smallwood (optics and condensed matter), and others will introduce their research programs, give an update on their current research, and discuss research projects that you can participate in — whether you’re an undergraduate physics major, a physics (or science education) graduate student, or you’re just curious what it’s like to do research. Masters students and undergraduates interested in participating in research, and/or those wishing to continue in physics after their degree, will find it especially valuable to attend and learn about the available opportunities.
